It is our pleasure to introduce the new open access journal: *Universal Journal of Civil Engineering (UJCE)*. *UJCE* publishes original research papers, review articles, communications, etc. Topics of publications in UJCE include, but are not limited to the following: structural engineering; construction engineering; transportation engineering; geotechnical engineering; earthquake engineering; coastal, harbour and offshore engineering; hydraulic engineering; environmental engineering; construction materials engineering; survey and geo-spatial engineering; municipal and urban engineering; solid mechanics.

Civil engineering is developed along with the development of human society. The engineering facilities it builds reflect the development of social economy, culture, science and technology in various historical periods, so civil engineering has become one of the witnesses of social and historical development. It has now been established as an exact and precise science, with both theoretical and practical components. *UJCE* is currently published semi-annually, and will be published on a quarterly journal with the support of our Editorial Board Members. This last profile will be of utmost importance in the coming years.

The main objective of *UJCE* is to present and disseminate high-quality papers in civil engineering, with a solid methodological structure, and with innovative elements. We will ensure a rigorous and rapid peer review process to provide rapid and scientifically accurate research dissemination within the field of civil engineering. *UJCE* aims to give scientists, scholars and researchers around the world a communication platform for disseminating, sharing and discussing issues and developments in different directions in the field of civil engineering. We hope that you will enjoy publishing with us.
