Catalysis is mainly the utilization of catalysts to accelerate the catalytic reaction process. Catalysis is a common and important phenomenon in nature. Catalysis almost covers the whole field of chemical reactions. 90% of commercially produced chemicals involve catalysts at some stage in their production.

Universal Journal of Catalysis Science (UJCS) is a peer-reviewed, open access journal focusing on catalysts and catalysed reactions. The journal adopts a double-blind review strategy to ensure the quality of the articles, while providing open access and free downloads of papers published. The journal is expected to promote the development of the research field regarding catalysis by exposing the frontiers in catalysis to a broader audience.

Benefitting from the joint efforts of the honoured editorial board and the scholars of interest, *UJCS* is foreseen to become the preferred platform to debut the latest findings in catalysis. Aspiring to be one of the most influential publishers of research literature, we encourage submissions of academic papers with unique and original opinions in every subcategory of the journal. Our editorial board is keen to assist in your submissions while screening the publishing process with strict standards being implied.
